ATTENTION: Read this document and the documents that are listed in the [Additional Resources](#) section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions and requirements of all applicable codes, laws, and standards.

In accordance with applicable codes of practice, suitably trained personnel are required to install, make adjustments, put into service, use, assemble, disassemble, and/or maintain this equipment.

If this equipment is used in a manner not specified by the manufacturer, the protection that is provided by the equipment can be impaired.

Description

Catalog Number 450L-AD-OID is an interface adapter that allows communication to a 450L safety light curtain.

Figure 1 - Schematic Operation Mode

The adapter can be used to:

- Obtain detailed service information of a 450L-B or 450L-E safety light curtain
- Configure a 450L-E safety light curtain
- Upgrade firmware of a 450L-B or 450L-E safety light curtain.
- The required Connected Component Workbench™ software (available at <http://www.rockwellautomation.com/global/support/connected-components/workbench.page?>) must be installed on a personal computer.

A USB interface manages the communication between the personal computer and the optical interface device (OID). A one meter USB connection cable (Catalog Number 2711C-CBL-UU02) is supplied by default in each 450L-AD-OID package:

- Connector personal computer: Male USB Type A
- Connector OID: Male USB Type Mini-B

ATTENTION: USB connection length must be less than 3 m (9.84 ft). Do not attempt to extend the cable.

The communication between the OID and the 450L safety light curtain stick is optical (infrared light). No cable is required for the communication between those two devices.

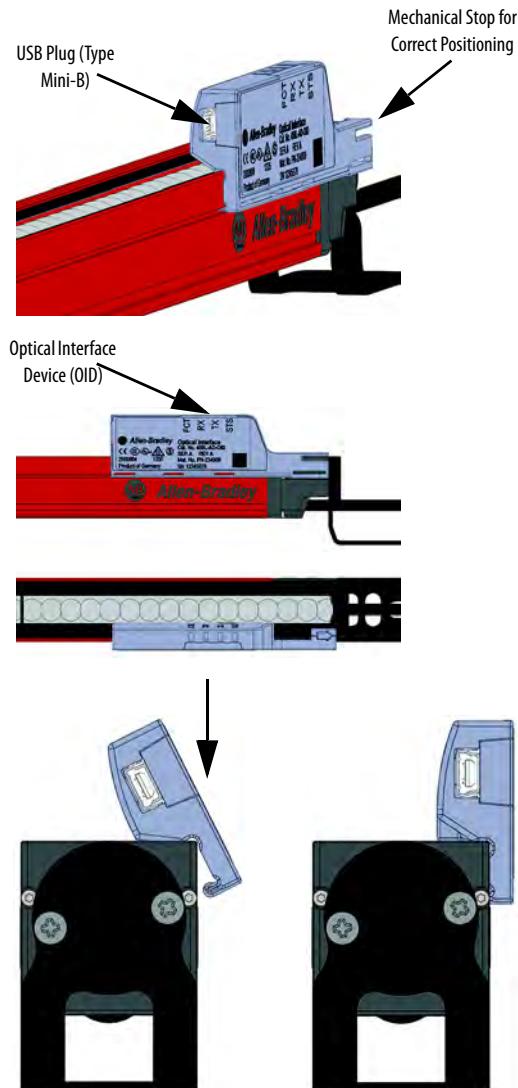

Installation

The device must be positioned correctly at the end of the protective field above the status indicators. This position allows an excellent optical communication between the safety light curtain stick and the OID interface.

First move the latch of the interface close to the bottom end cap so that it touches the end cap and then turn it so that it snaps in. A snapped on OID can still be shifted 2 mm (0.08 in.) up and down. This tolerance has no effect on the communication. Verify that power is applied to the 450L stick and to the personal computer. The green STS indicator on the OID turns on to indicate that the OID is receiving power through the USB port.

If it is the first time that an OID has been connected to the computer, you must install the Connected Component Workbench software first.

Figure 2 - Installation of the OID on a 450L Stick

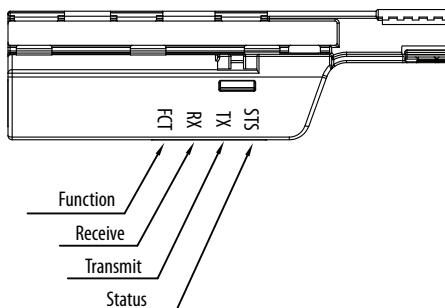

IMPORTANT The converter must not be installed in an area where the ambient atmosphere contains volatile or corrosive gas, vapors, or dust. If the converter is not going to be installed for some time, it must be stored in an area where it is exposed to a corrosive atmosphere.

Do not connect multiple OID to one computer.

Indicators

Figure 3 - Indicators at the OID

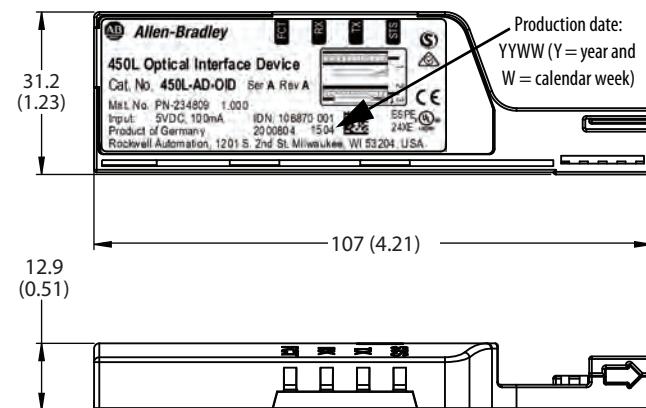

The optical interface device has four green status indicators.

Table 1 - Description of the Status Indicators

| Name | Behavior | Description |
|------|----------|--|
| STS | Off | No power from USB interface |
| | On | Normal operation |
| | Blinking | Error, use Rockwell Automation SW Control Flash to update FW |
| TX | Blinking | The OID transmits data to the 450L stick |
| | Off | The OID transmits no data |
| RX | Blinking | The OID receives data from the 450L stick |
| | Off | The OID receives no data |
| FCT | Off | OID and 450L stick not connected |
| | On | OID and 450L stick connected |

Dimensions

Figure 4 - Dimensions and Product Label for 450L-AD-OID [mm (in.)]

Technical Data

| Attribute | 450L-AD-OID |
|-----------------------|--|
| Enclosure rating | IP20 |
| Certification | CE Marked for all applicable directives; RCM UL listed when attached to light curtain |
| Housing Material | Polyamide |
| Size | 31.2 x 12.9 x 107 mm (1.23 x 0.51 x 4.21 in.) |
| Weight | 20 g (0.70 oz) (100 g (3.53 oz) with cable) |
| Operating temperature | 0...55 °C (32...131 °F) |
| Storage temperature | -20...+65 °C (-4...+149 °F) |
| USB supply | 100 mA @ 5V DC |
| Power consumption | <500 mW |

Operation Hints

- The OID can be snapped and operated on an already powered on stick.
- The OID doesn't interrupt the protective field after installation. It can be used for online monitoring.
- Remove the weld shield to install and operate the OID.
- The standard mounting kit (Catalog Number 450L-AM-TBM) and the side mounting kit (Catalog Number 450L-AM-SM) can be used in combination with the OID.
- The integrated laser alignment can be operated when the optical interface is installed.
- Use the "Help" function of Connected Component Workbench software to find requested diagnostic information.
- To perform a FW update of the OID itself, be sure that the OID is connected to the USB interface only and not be installed on a 450L stick.
